

STOPPER INCORPORATING A COMPOSITION OR PREBLEND BASED  
ON VOLATILE CORROSION INHIBITORS

5 **ABSTRACT**

The invention relates to a polymer-based stopper, characterized in that it incorporates a composition or preblend based on volatile corrosion inhibitors which comprises an effective amount of at least one structuring agent consisting of a solid or pasty substance whose melting point is from 40 to 110°C, preferably from 50 to 90°C.

The invention is also directed towards the use of the said stopper for the internal protection of hollow metal components against corrosion.
